

# Electronic Medical Record (EMR) Integrator

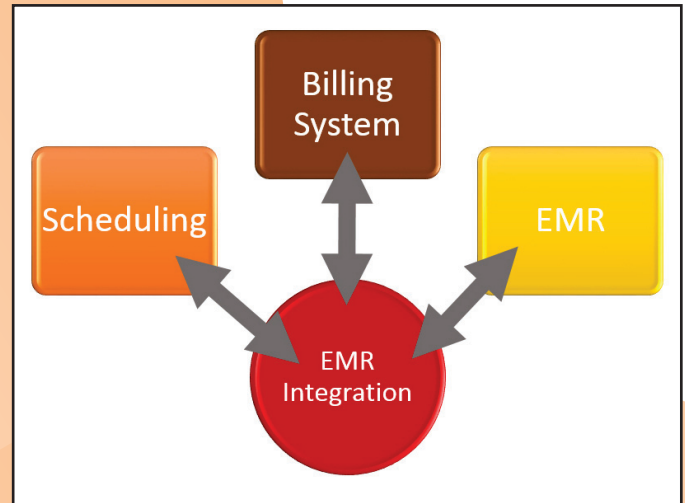

## Seamlessly Integrate Your Systems

Getting data into and out of EMRs (and other medical systems) can be challenging. There are many different formats with little consistency between vendors. Some use XML, JSON or proprietary file formats. Blue Button Plus and other standards initiatives make interfacing between systems difficult.

Using a repository-based approach, **EMR Integrator** generates the code to transform data from one system to another.

### Less development time needed:

- No duplicate information entry
- No need to write thousands of lines of code
- Repository-based approach captures data structure rules
- Fast and efficient debugging
- Speedier integration with existing systems

**Use EMR Integrator to manage medical data**

### What does it cost?

We offer a variety of pricing models:

- Monthly subscriptions
- Small up-front fee + per usage fee

### Key Features:

- *Uses a full business rules repository approach*
- *No hand coding*
- *Separate repositories for data validation rules and interface mapping*
- *100% of the code is generated*
- *Multiple code generation language choices (Java, PL/SQL, etc.)*
- *Web-based and cloud hosted - nothing to install*
- *Hosted at HIPAA-secure site*
- *Upload forms to EMR*

**Our goal is to ensure that you get far more value than what you pay for.**

### The EMR Integrator can be used for:

- Single record transfers
- Nightly synchronizations
- Bulk data migrations
